Please complete this form to the best of your knowledge electronically. Submit the completed report with the Responsible Official's original (wet) signature to the Department of Air Quality by mail or in person at the address listed above.

**Directions for completing the form manually:**

- Method of Measurement – Select one of the items listed in the dropdown box.
- Actual VOC emissions (tons/year) = Actual throughput in gallons multiplied by **0.0000135** if the facility has both Phase I and II controls,
- Actual VOC emissions (tons/year) = Actual throughput multiplied by **0.0000082** if the facility has only Phase I control.
- Actual VOC emissions (tons/year) = Actual throughput multiplied by **0.000012** if the facility has no controls.
- Actual HAP Emissions (tons/year) = 5.2% of the actual VOC emissions

**Example Calculations:**

Actual gasoline throughput (dispensed) in the reporting year = 1,000,000 gallons

**Example of Phase I and II calculation:**

VOC Emissions if the facility has both Phase I and II controls = 1,000,000 x 0.0000135  
= 1.35 tons/year

HAP Emissions = 1.35 x 0.052 = 0.07 tons/year

**Example of Phase I only calculation:**

VOC Emissions if the facility has only Phase I control = 1,000,000 x 0.0000082  
= 8.20 tons/year

HAP Emissions = 8.20 x 0.052 = 0.43 tons/year
