

SECTION 1: DEFINITIONS

In these Air Quality Regulations, unless the context otherwise requires:

- 1.3 "Affected facility" means, with reference to a stationary source, any apparatus to which a standard is applicable.
- 1.4 "Dust" means minute solid particles released into the atmosphere by natural forces or by mechanical or chemical processes.
- 1.5 "Existing Gasoline Station" means a place capable of receiving, storing, and dispensing one or more grades of gasoline for use in motor vehicles and on which construction began before November 1, 1977.
- 1.6 "Fumes" means minute solid particles generated by the condensation of vapors from solid matter after volatilization from the molten state, or by sublimation, distillation, calcination, or chemical reaction when these processes create airborne particles.
- 1.7 "Mist" means liquid particulates or droplets about the size of raindrops (such as fog) that are formed by condensation or vapor, or atomization of a liquid by mechanical spraying.
- 1.8 "New Gasoline Station" means a place capable of receiving, storing, and dispensing one or more grades of gasoline for use in motor vehicles and on which construction began on or after November 1, 1977.
- 1.9 "New Source" means any stationary source of air contaminant on which construction or reconstruction began after August 25, 1971.
- 1.10 "Single Source" means all similar process operations located at a single contiguous property that can technically be replaced by a single process that performs the same function.
- 1.11 "Standard Conditions" means a temperature of 20°C (68°F) and a pressure of 760 mm (29.92 inches) of mercury.
- 1.12 "Uncombined Water" means a visible mist of condensed water vapor.
