

Advisory - APA Launches Youth Fireworks Education Initiative

June 24, 2016

The APA issued a [press release](#) this morning announcing the launch of the youth education initiatives of the American Pyrotechnics Safety & Education Foundation.

The association's 501 (c) 3 charitable arm was established two years ago with the mission to develop fireworks safety and education programs for youth including the history of fireworks, the science & engineering underlying fireworks, and the responsible use and potential misuse of fireworks.

To that end, a series of brief animated videos, featuring *Professor Sparkz* have been completed to accompany the subject specific educational curriculum kits created to assist teachers and youth educators.

Today's release stresses APA member company commitment to increase the safety of our products and our hope that the educational programs of the Foundation will be warmly received by school districts and educators across the country to help instill a safe and responsible approach to all fireworks activities.

Please take a couple of minutes to view two of these wonderful animated vignettes debuting to the public today.
