NOTES & HIGHLIGHTS

¹Data is only available since the implementation of NaviLine (May 1, 2010).

²The Recycle Rate is a quantitative measure of the percentage of Fire Prevention Bureau applications that have to be returned to the customer for correction(s).

³The total number of Renewable Permits issued during the reporting period. Examples include but are not limited to: aerosol products storage, explosives storage & use, flame effects, gas stations, and wood working shops.

⁴Periodic inspections of existing commercial buildings that demonstrate required Fire Protection Systems are being properly maintained by the owner or property management. Examples include but are not limited to maintenance of fire pumps, automatic fire extinguishing systems, and fire alarm system(s).
