Injuries	1	3	45	74	62	48	36	-25.0%

Notes & Highlights

Summary excludes airport and volunteer stations.

Incidents measure separate events. Responses measure the number of units that respond to each incident.

¹Response time measures from call pickup to first arriving unit on scene to all emergency incidents. CCFD response time goal is 7 minutes to 90% percent of the incidents.

²Other category includes responses and incidents such as smoke investigations, extrications, fuel spills, etc.

³Full Alarm Assignment capability is met when response travel time is within 480-seconds to 90% of the incidents. Travel time is measured from wheel start, to wheel stop.

⁴Peak units are deployed during expected high-call volume days and times on an 8 hour shift. These units were implemented on January 13, 2012.

⁵Responded to vehicle fires in California and outlying areas.

⁶Does not include responses that occurred in intersections within city limits, or any other unidentifiable locations (i.e., highways, county islands, GPS coordinates, etc.). Modification made to the reporting system after 2010.
