

# Clark County Law Library Medico-Legal Exhibits

The Clark County Law Library offers medico-legal anatomical exhibits for check-out on your Clark County Law Library borrower's card described in [Legal Guide 5](#).

**Articulated Human Arm** -- The skeletal arm is attached to the scapula and clavicle.

**Brain, Giant Functional** – This brain model

reproduces the brain of a right-handed person, employing contrasting colors and hand-lettered captions to locate and identify motor and sensory functional centers.

**Human Digestive System** – This life-sized model comes in three parts to display the entire digestive system in graphic detail with a removable transverse colon and front stomach wall.

**Oversized Human Ear** – The ear is

three times life-size and features a removable eardrum, hammer, anvil and stirrup as well as a two-part labyrinth with cochlea and auditory balance nerve.

**Full-Length Articulated Skeleton and Stand** - The skeleton is five feet tall on a rolling stand, featuring individually inserted teeth and a three-part mounted skull. The 200 bones are calibrated to a realistic weight.

**Heart** – This highly detailed two-part heart has a detachable front heart wall that reveals the chambers and valves inside.

**Human Eye in Six Parts** – The eye is three times natural size and dissects into the sclera, cornea, choroids, iris, retina lens, vitreous humour, and attached eye muscles.
