DESERT CONSERVATION PROGRAM PROJECT COMPLETION SUMMARY
Reports for State-Listed Plants
2017-IRONWOOD-1735A

The work for the above referenced project has been completed. Below is a summary of project related information.

The purpose of the above referenced project was:

The Desert Conservation Program (DCP) holds a permit with the State Forester Firewarden which provides removal/disturbance authorization for all fully protected flora species in the county. Completion of Current Status and Conservation Knowledge Reports is a required condition for the issuance of the master permit. The reports will address the threecorner milkvetch, Blue Diamond cholla, and sticky buckwheat. These species are listed by the Nevada Division of Forestry as "fully protected" native plant species that are critically endangered and threatened with the potential to become extinct within the state of Nevada. Entities such as the NDF and the DCP require the most current and comprehensive data available to make informed management decisions.

The major accomplishments or findings of this project include:

Project was canceled due to changes at the consultant company. The completion of the final reports could not be submitted to DCP. Drafted reports for the three focus species were submitted to DCP however, which will work as a basis for future reports. This will help another qualified contractor complete the final reports.
